

SCREEN MEDIA

Polyurethane Screening Media

Why Use Poly?

Polyurethane has exceptional resistance to wear and abrasion from smaller particles <30mm in wet screening application

Polyurethane Tension Mats

Most commonly used in washing and sizing applications where maximum lump size is less than 30mm

PU Tension Mats require no screen deck modifications and are as easy to install as wire cloth. The moulded tapered apertures help to eliminate plugging and blinding in difficult situations.

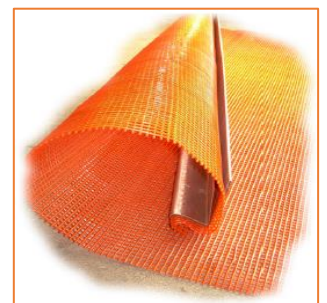

PU Tension Mats are suitable for a wide variety of wet or dry screening applications and usually last around 10 times longer than woven mesh.

Ultra-Flex PU Tension Mat

Ultra-Flex Urethane-encapsulated wire Tension Mats offer the advantages of urethane screen media without the need to convert to a modular deck and without great sacrifice to open area.

Custom designed for dry screening applications where severe pegging and blinding occurs. Manufactured from abrasion resistant PU cord the extreme flexibility of the Ultra-Flex screen mat prevents fines build-up on the screening surface.

Modular Screen Panels

Nepean's modular rubber screen panels are custom designed for each and every application. Rubber type, hardness and thickness are tailored to suit the site specific operating conditions.

Available in a variety of panel sizes to fit most popular fastening arrangements
